Dental Materials: Applications, Benefits and Limitations

Speaker: Dr. Jackie Bunce

Improvements in dental materials, especially the introduction of composite materials and shape memory wires (for orthodontics), have greatly improved the dental treatment possibilities and treatment outcomes for patients of all ages. Most of these materials were originally developed for aerospace applications and later adapted for dental applications.

Dr. Bunce will discuss the applications of dental materials, as well as their benefits and limitations. Areas covered will include:

1. Composite materials used for dental fillings and orthodontics
2. Adhesives
3. Invisalign orthodontic treatment-what it is and how it works
4. Dental implants
5. Dental impression materials

Dr. Bunce will use a dental imaging program to help demonstrate some of these applications and will be available to answer questions about dentistry.
